1 Introduction

This document describes the differences between the MPIs of Hi3516D V300, Hi3516A V300, and Hi3519A V100.

The differences are classified into the following types: MPI function name difference (addition, deletion, and modification), public data structure name difference (addition, deletion, and modification), MPI function behavior difference, and public data structure parameter range difference. The corresponding differences include but are not limited to the following: MPI functions and public data structures (such as structure, enumeration, and union). This document briefly describes the differences between various subjects and the causes of the differences. For details about the MPIs and scenes, see the *HiMPP V4.0 Media Processing Software Development Reference.*
